

NUCLEUS & CROWDSTRIKE

Bridging the gap between endpoint security and vulnerability management.

YOUR CHALLENGE.

Lacking unified visibility across your security stack, making it difficult to manage assets and vulnerabilities and assess and report risk.

Endpoint security data has traditionally siloed in its own ecosystem, making it difficult to correlate data with other scanning and asset tools in use. Due to these separate sets of information in various places, security teams lack full insight into their true risk and security posture. This forces suboptimal decisions on prioritization and remediation and makes effectiveness in vulnerability management next to impossible.

OUR SOLUTION.

Nucleus connects your endpoint security data to your other vulnerability data for an integrated, holistic view of your security posture.

With this integration, users can sync real-time endpoint security data from CrowdStrike's Falcon Spotlight module into Nucleus, providing vulnerability management teams with accurate and complete data in a consumable format to be managed alongside other scan results and risk information. This connection between platforms automates the manual process of reporting endpoint findings to the vulnerability management team–saving time, simplifying reporting, and automating workflows in the enterprise Risk Management process.

KEY BENEFITS

BEAT VULN FATIGUE

All enterprise vulnerability data sources combined and organized in one place for fast, easy analysis, prioritization, and action.

UNIFY DATA SOURCES

Combine endpoint vulns with normalized scanner data, SCA and DAST/SAST feeds, pen test and compliance findings.

ACCELERATE RESPONSE

See and act on endpoint vulnerabilities faster with streamlined workflows and powerful automations.

AUTOMATE PRIORITIZATION

Leverage org-defined asset risk criticality, vulnerability metadata, and high-quality threat intelligence to automate triage and response.

NUCLEUS & CROWDSTRIKE

IMPROVING ENDPOINT SECURITY VISIBILITY AND VULNERABILITY MANAGEMENT PROGAMS.

By combining capabilities, organizations gain a more accurate representation of the security posture of their assets, enabling leadership to make informed decisions when it comes to remediation and prioritization. These benefits transcend practitioners of vulnerability management or endpoint security individually, extending to the entire enterprise security team.

Nucleus Dashboard.

Nucleus makes the tedious vulnerability management process simple through smart automation and workflow optimization, uniting the existing tools in your security stack, including endpoint security tools such as CrowdStrike Flacon Spotlight, network, application, and cloud scanners, plus pen test and compliance audit findings, in one view.

Why It's Important:

- According to a study by the Ponemon Institute, 68% of organizations have experienced one or more endpoint attacks that successfully compromised data and/or their IT infrastructure.
- ✓ The ServiceNow 2019 Security Study found that 60% of breaches were related to unpatched vulnerabilities.
- ✓ Another study from Positive Technologies uncovered the alarming statistic that 84% of companies have high-risk vulnerabilities on their external networks.

ABOUT CROWDSTRIKE

CrowdStrike Falcon Spotlight™ provides an immediate, scanless solution for comprehensive vulnerability assessment, management, and prioritization for IT analysts. Built on the CrowdStrike Falcon® platform, it offers vulnerability prediction and dynamic rating capabilities as well as intuitive reports, dashboards, and filters to help your IT staff improve your security posture.
