

# Sevco Security Asset Intelligence Platform

Sevco is a cloud-native asset intelligence platform that delivers a comprehensive asset inventory, enabling you to get more from existing investments and improve your security posture.

## **Key Benefits**

## **Identify Coverage Gaps**

Quickly identify assets missing from critical security tools or in partial states of configuration. Generate tickets for these devices to be remediated.

#### Validate Compliance

Continuously report on and validate the presence and configuration state of security controls to ensure compliance requirements are met. Gain visibility into any issues to proactively remediate before audits.

## **Expedite Incident Response**

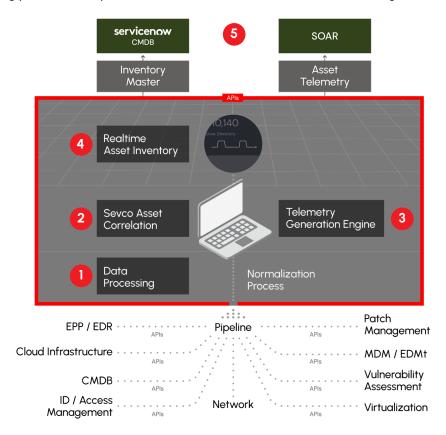

Run incident response investigations through Sevco's single pane of glass, the most in-depth view of any single asset and the security state of your entire environment, aggregated from across all of your tools.

## Find Vulnerable Conditions

Automatically uncover assets with vulnerabilities or vulnerable conditions that are missing from the tools that should be protecting them. Cross reference users, devices and software to prioritize remediation where it is most imperative.

While organizations often own the right tools to secure their businesses, they have little insight into how these investments are deployed across their environments. This lack of visibility upends the foundation of every major security framework and presents a challenge to security teams: they can't protect what they can't see.

Sevco is a cloud-native asset intelligence platform that delivers converged asset inventory and generates real-time asset telemetry, then publishes both for use by other IT systems. Sevco makes sense of the data our customers already have, making their existing products and procedures more effective—with little or no change to them.

- **Data Collection:** Sevco integrates with your existing systems via native APIs to pull their specific view of asset information.
- Correlation Analysis Engine: Sevco identifies key attributes from source systems to join disparate inventory reports.
- **Telemetry Generation**: Sevco monitors asset state and generates asset and attribute change events.
- Dashboard / User Interface: Sevco displays converged inventory via an interactive Venn Diagram to uniquely shows "well managed" assets as well as assets in various states of partial configuration.
- Publication: Sevco's data is fed into existing tools to drive and support existing processes and procedures.

### **Unified Asset Inventory**

Fully managed aggregation, correlation, and deduplication of assets across all your existing tools to deliver the industry's most accurate and comprehensive security asset inventory.

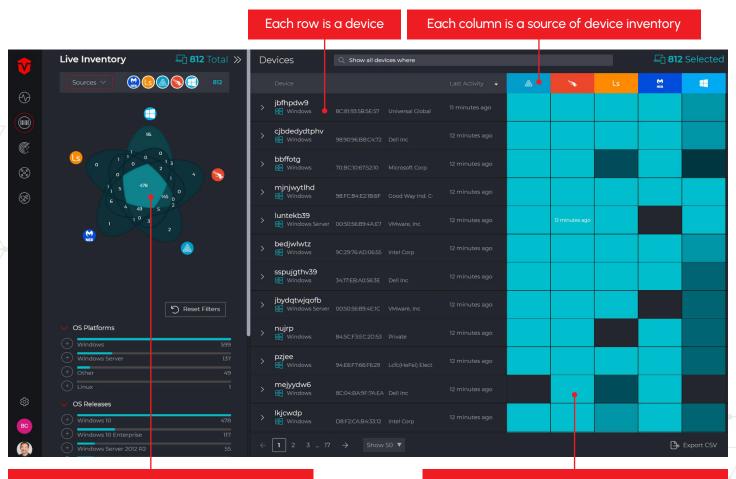

#### **Telemetry Generation**

With each source's inventory report, Sevco generates Inventory or Attribute Change Events describing the change. Telemetry provides records of key attributes, critical to investigations and traceability.

#### **Cloud-Native Architecture**

Sevco seamlessly integrates with existing inventory sources via native APIs. The platform automatically scales from limited source evaluations to full-scale enterprise configurations without any resizing.

## Sevco Platform

The interactive Venn diagram displays the number of devices reported by each combination of sources

The brighter the color in the column, the more recently the device was observed by that source.

#### **About Sevco Security**

Sevco is the cloud-native CAASM platform delivering the industry's most accurate, real-time IT asset inventory. Hundreds of companies rely on Sevco's 4D Asset Intelligence engine to bridge the gap between IT and security teams. By providing a continuously updated inventory of assets, Sevco autonomously identifies and closes previously unknown security gaps, while dramatically improving incident response. Sevco's patented asset telemetry uncovers significant security gaps and out-of-compliance assets in every deployment without fail. Founded in 2020 and based in Austin, Texas.
