Protect Software Supply Chains & Secure Application Delivery from Code-to-Cloud

Legit secures your applications from code-to-cloud with automated SDLC discovery/analysis and real-time application security posture management for the integrity, governance and compliance of every software release.

Legit Security Platform Capabilities

Software Supply Chain Security

- Real-time SDLC auto discovery & analysis
- End-to-end CI/CD pipeline security
- SDLC visualization models & graph database
- Secrets scanning with CLI

Code-to-Cloud Traceability & Security

- Application traceability from code to cloud
- Contextual threat prioritization
- Forensic detail from code origin to vulnerability
- Infrastructure-as-Code scanning

Application Security Control Plane

- Unified application security control plane
- Application governance and risk scoring
- Consolidated vulnerability management

Continuous Compliance & SBOM

- Align regulatory compliance to sec. guardrails
- Continuous assurance and drift detection
- Extended SBOMs

Unlike traditional AppSec tools and scanners focusing narrowly on code, Legit secure the entire pre-production attack surface including CI/CD pipelines, SDLC systems/infrastructure, and the teams that operate within it. By providing real-time application security posture management and deep security issue context to rapidly prioritize issues, security teams can accelerate their productivity, effectiveness, and developer collaboration.

"We're now able to inventory all our SDLC systems and security tools, view developer activity, and detect and remediate vulnerabilities across them fast."

Bob Durfee | Head of DevSecOps | Takeda Pharmaceutical Company | Fortune 500

Legit Security: An Enterprise Solution That Delivers Value Fast

Deploys In Minutes
No agents to install. Leverages read-only APIs and access tokens.

Immediate Visibility
Auto-discovery and analysis of the entire SDLC, from code-to-cloud.

Your Workflows And Tools
Connect with your tools and workflows. No change required to any of them.

Run It Anywhere Protect It All
Select your deployment model: SaaS, Private Cloud or On Premises.

Why Leading Enterprises Choose Legit

Cost Reduction
- Reduce/eliminate security control redundancies
- Ensure full utilization of free/low cost tools
- Optimize security control placement
- Discover and eliminate shadow IT across the SDLC

Streamlined Compliance
- Achieve initial compliance faster through gap analysis and remediation for missing controls
- Risk scoring and continuous drift monitoring
- Streamline audits including automated compliance reporting

Productivity/Efficiency Gains
- Remediate security issues faster and cheaper
- Consolidate vulnerability management
- Automate remediation to reduce team workload
- Streamline security issue classification & risk eval
- Improve Dev/Sec collaboration for faster TTR
- Reduce developer time to close vulnerabilities

Risk Reduction
- Real-time security posture management across apps, pipelines, SDLC systems, and teams
- Security coverage data to increase developer adoption of security best practices
- Implement automated SDLC security guardrails
- Secure against new software supply chain threats
